

IT INFOSESSION 30 JUNE 2023

This meeting is recorded for purposes of meeting minutes, delayed viewing by absentees, and internal (HD) knowledge transfer. The recording will be available for download via the DOCS website

AGENDA

- Q&A

Q&A

EAM

Q01	Who has the right to make corrections for the pacemaker/Angioplasty registers that have already been validated?	Anybody who can make registrations for the project is able to send corrections after the initial data has been submitted and validated. A record sent containing a business key already known at healthdata.be is considered as a correction, because the latest record will always become the new 'active' record.
Q02	Is it possible to change the author group for a series of already validated registers?	It isn't possible to change some technical fields of which author, co-author and author group are part of.
Q03	How can I change the user name and keep the same password? For example, if the e-mail address changes	This isn't possible because the email address is directly linked to the user account. Therefore, a new user account needs to be created if there is a change of email address.
Q04	What we can do if a user enters records under the wrong role ?	The role the user had upon creating a record is not stored in the metadata of the record. Therefore, there is no negative impact on the record itself.

Q&A

Q05	Is it possible to create a user profile AND grant access to users in one single operation in EAM using the upload batch request?	Yes, access managers can upload a csv containing user details in order to both create a profile AND grant the appropriate requested accesses in one single action.
-----	--	--

MISC

Q06	Why doesn't the national registry bring back the patient data as in the first version?	Healthdata.be is not anymore allowed to provide this functionality in our applications by eHealth. The policy eHealth applies is that patient information should be available in the EHS (Electronic Health System) and from within the EHS there is a direct link to ConsultRN to retrieve the patient data. This is, one hand, to protect the patient privacy and, on the other hand, to limit the number of requests to ConsultRN.
-----	--	---

HD4DP2

Q07	If you have a csv file with multiple records and there is an error for one record in the csv. Is the entire csv not uploaded or just the record with the error?	It's just the record with the error which isn't uploaded
-----	---	--

ONLINE ACCEPTANCE ENVIRONMENT

Q08	I have been waiting a long time to receive my online acceptance environment credentials. Can you help me get them?	All access requests have been sent through to all the hospitals a few weeks ago. If this isn't the case for your hospital, then it's possible the credentials were sent to a contact who might perhaps have left the organization. Please create a ticket in our Service Desk to request these same credentials again.

And now....over to Kurt

ARCHITECTURE 2.0 : ROADMAP (Filtered for DPs)

Q2
2023

- Optimise A2 services to reduce CPU/RAM impact
- EAM 2.5
- EAM 3.0

Q3
2023

- Store full Submission in MongoDB
- Data Validation Request
- HERA Integration (incl. sending large files)
- XLSForms
- DP Ubuntu Upgrade v18 to v22
- Standardize VPN

Q4
2023

- CSV2NextGen
- S2S2NextGen

2024

- HL7FHIR integration
- XLSForms automations

HD Business & Migration projects : ROADMAP (Filtered for DPs)

Q1 + Q2
2023
